

# For Ford ESCL Emulator C1 platform LIN Black Connector

Focus mk2  
C-Max  
Kuga

M4-1317

## For Focus C-Max Kuga Steering Lock Emulator

### For Focus C-Max Kuga Steering Lock Emulator Overview:

Device emulates Ford ESCL unit, compatible with Ford C1 platform cars (Focus mk2, C-MAX etc) starting from **2012 and up**. Original SCL part number looks like AV6N-3F880-Jx, connector has 4 pins, only 3 wires used, SCL connector color is BLACK !!! In case if you have GREEN connector, you have older K-line architecture instead of LIN - this emulator is not compatible with K-line systems. Be careful because both part numbers (for LIN and K) are printed on SCL casing with remark to plug color. Emulator is plug & play, no alignment necessary.

### For Focus C-Max Kuga Installation on Car:

- Stop the car.
- Plug connector into the Socket.
- Note that original SCL is powered only when there is a request for status or command for open or close.
- Emulator Successfully Installed.

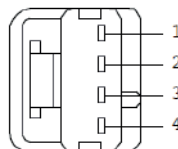

### For Focus C-Max Kuga Steering Lock Emulator Light Behavior:

Led on emulator:

- Red SCL is in locked state
- GREEN SCL is in unlocked state

### Pinout:

- pin1: not used (no wire).
- pin2: +PWR (switched)
- pin3: GND.
- pin4: LIN
